Skills

Languages and Tools

- Unity
- C#
- SQLite
- HTML / JavaScript
- Python
- Firebase
- Version Control (Git)

Technical Skills

- Copilot / Cline / Claude AI Development
- Editor Tools Programming
- Unity Jobs System
- Environment & Lighting (Unity)
- Animation System (Unity)
- Mobile Development

Education

University of Central Florida
BS in Computer Science

Experience

8K Solutions (March 2022 - January 2026)

- Worked within a small team of 4–5 developers, translating requirements into technical solutions, coordinating with designers and product owners to resolve ambiguities, and driving projects to completion with minimal direction.
- Developed and optimized Unity stadium scenes; identified a major workflow bottleneck and built a Unity editor tool that reduced scene authoring time from ~1 week to 1 day.
- Owned maintenance and development of client-facing peripheral applications (Launcher, Installer, Updater, Repair Tool), acting as primary point of contact for issues, deploying fixes, and ensuring reliable product delivery.
- Architected and implemented a highly encapsulated User Preferences system, designed for scalability, extensibility, and rapid iteration.
- Proposed and executed high-impact refactors of foundational systems, improving code maintainability, reducing technical debt, and enabling faster feature development.

Dignitas Technologies (February 2018 - March 2022)

- Designed and implemented features across C#, Python, C++, and Java codebases, ensuring maintainable, extensible architecture
- Integrated cyber simulation data into 3D battlefield visualization tool, fully designing and implementing the system, managing synchronization across applications, and ensuring stability under tight deadlines.
- Held a security clearance during this time.

Independent Work

- *The Border Lord*: A turn-based tactics game in Unity; designed, implemented, and iteratively refined gameplay systems over 2 years while managing full project scope, playtesting, and feature updates. Intended to release on Steam, WIP demo on itch.io, code available on GitHub.
- *Survive the Squids* (July 2024): A top-down 2D survivors-like, developed using Unity and published to Steam; with a positive user review score. Code available on Github.
- *EndSoldier* (April 2023): A top-down 3D survival shooter, made with Unity and published to itch.io. Code available on Github.
